

PROFILE

Innovative and deadline-driven Full Stack Developer with a strong background in .NET.

After spending 13 years in the medical device field selling surgical robotic systems, I became more interested in the software and technology that drove these systems than making a sale. Becoming a software developer was the next logical step and challenge in my life.

Please feel free to visit my portfolio website listed below to explore my Issue Tracker and Blog, which were created using C# and the .NET framework.
